

PEPFAR Zimbabwe OI/ART Clinic Space Creation Project

PEPFAR/Zimbabwe is funding procurement and installation of approximately 150 prefabricated buildings to be deployed nationwide to provide additional clinic space in support of decentralization of the Ministry of Health and Child Care (MOHCC) Opportunistic Infection/Antiretroviral Treatment (OI/ART) program. Each “porta-cabin” will have three rooms for consultation, counselling, and a pharmacy, and will be equipped with basic furnishings and connected to local utilities for lighting and hand washing.

Building design and site selection have been a collaborative effort of the U.S. Centers for Disease Control and Prevention (CDC)/Zimbabwe, MOHCC national and provincial leadership, Ministry of Public Works, and Ministry of Finance. Contracts for supply and installation have been awarded to two companies: Fuduric/eps GbR, Germany, and Abacus Space Solutions, South Africa.

- The first contract was awarded in May 2014 for 15 sites in Mashonaland Central, East, and West, with completion scheduled in September 2014.
- Site visits have been completed for an additional 80 units throughout the country. A contract for these will be awarded in 2014 with completion scheduled by mid-2015.
- Site visits for additional units, contract award, and installation are planned by the end of 2015 for as many as 60 more units, depending on final costs per unit.
